                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        DB seq length: 0

                                                                                                                                                                                                                                                                                                                                                                                                Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                          mitochondria derived activator of caspase (smac), also known as direct inhibitor of apoptosis binding protein with low pI (DIABLO), but with the native N-terminal alanine residue (see ABB76209) acetylated. Claimed smac-derived peptides (see ABB76209) bind to the Bir2 and Bir3 domain of XIAP, an inhibitor of apoptosis protein (IAP) family member. Modification of the N-terminal alanine destroys all binding affinity for the protein. Thus, Kd values for Bir-3 and Bir-2 were each over 1,000 uM for the present peptide, compared with 0.43 +/- 0.06 uM and 6.0 +/- 0.9 uM, respectively, for the corresponding wild-type peptide. The claimed smac-derived peptides can be used to identify candidate substances which induce or promote apoptosis in cells. The assay involves determination of the ability of candidate compounds to

fluorescence polarisation-based competition assay designed to determine the binding affinity of variant smac peptides (see ABB76206-27) to the Bir-3 and Bir-2 domains of XIAP, an inhibitor of apoptosis protein (IAP) family member. Claimed smac-derived peptides can be used to identify candidate substances which induce or promote apoptosis in cells. The assay involves determination of the ability of candidate compounds to disrupt the binding interaction between a smac peptide and an IAP family member.
                                                                                                                                                                                                                                                                                                                                                                                                    Human; pro-apoptotic protein; DIABLO; cell death; apoptosis; inhibitor of apoptosis; IAP: cancer; vascular disease; hepati autoimmune disease; neurodegenerative disease; tissue damage; muscular tissue damage; heart attack; hepatic tissue damage;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence corresponds to amino acids 1-9 of human second mitochondria derived activator of caspase (smac), also as direct inhibitor of dapptosis binding protein with low pI (DIABLO), but is fluorosceinated. The peptide was used in a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Novel peptide derived from wild-type human second mitochondria derived activator of caspase protein useful for identifying candidate substances to kill cancerous cells - \,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              CC in length. Also included are the polynuclectide encoding DIABLO.

CC expression vectors, transformed host cells, producing a biologically constitute fragment of DIABLO (by contacting an inhibitor of apoptosis (IAP) cof the IAP), producing a natural or synthetic variant of DIABLO (cof the IAP), producing a natural or synthetic variant of DIABLO (cof the IAP), producing a natural or synthetic variant of DIABLO (cof the IAP), producing a natural or synthetic variant of DIABLO (cof the IAP), producing a natural or synthetic variant of DIABLO (cof binding molecule that specifically binds to DIABLO or its fragment, cof detecting DIABLO in a biological sample (by contacting the sample (cof with an IAP and detecting the presence of an IAP/DIABLO complex), comparison and composition for treatment/prophylaxis of a DIABLO, is conducting the death of a cell (by contacting a cell with an composition for treatment/prophylaxis of a DIABLO, is conduction comprising an agent which reduces the level/activity of a coplypeptide or DIABLO, or a nucleic acid encoding DIABLO, is considered to the modulates the level and/or functional activity of a polypeptide comprising mature or pro-human DIABLO in a biological sample. The agent which modulates the level and/or functional activity of a polypeptide comprising mature or pro-human DIABLO polypeptide, is cuseful for the treatment and/or prophylaxis of a condition associated with services of a sasociated with heart condition activity of a cassociated with cell death or apoptosis. The present sequence comprising protein sequence from human DIABLO, which co-precipitates with the human IAP protein MIHA (not defined).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful in reating disorders involving aberrant protein expression or biological activity. The polypeptide and polypucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic amino acid sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO

                                                                                                                                                                                                                                                                                                                                                                                      ABB76218 standard;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques

Also described is a CC method of identifying a compound that inhibits apoptosis, comprising: CC (a) separately contacting several cell populations expressing a CC cytosolic Smac (a Smac isoform that begins with MKSDFYF sequence, (I)). CC and residues 56-60 of (I)) and an inhibitor of BID (Bcl2 interacting) CC domain) with a compound to be tested for apoptotic inhibiting activity; (b) incubating the cell populations with a direct stimulus of the cell cell populations with a direct stimulus of the cell cell populations, where inhibition of the specific apoptotic activity is CC indicative that the compound is an inhibitor of apoptotic activity is CC indicative that the compound is an inhibitor of apoptosis. (I) and (II) are useful for inducing apoptosis in a cell. The Smac polypeptide and CC polynucleotide are useful for stimulating apoptosis. (I) and (II) CC are useful for identifying apoptosis in a neophastic or CC inhibitor inhibits activation or activity of caspase, where the CC inhibitor inhibits activation or activity of caspase, where the CC inhibitor inhibits are presented or activity of caspase and poptosis which involves contacting a cell transformed or CC inhibitor inhibitor inhibitor or activity of caspase. (I) and (II) is useful for identifying an inhibitor or enhancer of a caspase in CC cell viability indicates the presence of an inhibitor and adecrease in CC cell viability indicates the presence of an inhibitor and adecrease in cell viability indicates the presence of an inhibitor and an increase in processing indicates the presence of an enhancer. Optionally, the compound that inhibits small submits of CC caspase-3, caspase-7 or caspase-9 are detected. (I) is also useful for CC caspase-1, caspase-1 or caspase-9 are detected. (I) is also useful for CC caspase-1, cas
                                                                                                                                                                                                                                                                                                                                                                                     밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

with an IAP and detecting the presence of an IAP/DIABLO complex), modulating the death of a cell (by contacting a cell with an agent, which modulates the level and/or functional activity of a polypeptide), a composition for treatment/prophylaxis of a DIABLO relate condition comprising an agent which reduces the level/activity of a polypeptide or DIABLO. DIABLO, or a nucleic acid encoding DIABLO, is useful for screening for an agent which modulates cell death. An antigen-binding molecule is useful for detecting DIABLO in a biological sample. The agent which modulates the level and/or functional activity of a polypeptide comprising mature or pro-human DIABLO polypeptide, is useful for the treatment and/or prophylaxis of a condition associated with expression or activation of DIABLO, such as cancer, vascular disease, hepatic disease, autoimmune disease and neurodegenerative
                                                                                                                                                                                                                                                                                                                                                                                                                                                designated DIABLO, or its biologically active fragment of 8 amino aci in length. Also included are the polynucleotide encoding DIABLO, expression vectors, transformed host cells, producing a biologically active fragment of DIABLO (by contacting an inhibitor of apoptosis (I with a fragment of the polypeptide, and detecting a reduction in acti of the IAP), producing a natural or synthetic variant of DIABLO with cell death activity or which reduces IAP activity, an antigenbinding molecule that specifically binds to DIABLO or its fragment, detecting DIABLO in a biological sample (by contacting the sample detecting DIABLO) in a biological sample (by contacting the sample)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New pro-apoptotic polypeptide, useful for screening for agents which modulate cell death and for treating conditions associated with cell death or apoptosis \mathbf{e}_i g . cancer

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                         Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                            δÃ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to an isolated Smac peptide or polypeptide (I) CC and an isolated nucleic acid (II) encoding (I). Also described is a CC method of identifying a compound that inhibits apoptosis, comprising: CC (a) separately contacting several cell populations expressing a CC vytosolic Smac (a Smac isoform that begins with MKSDFYF sequence, CC replacing the mitochondrial targeting sequence (residues 1-55 of (I)), CC and residues 56-60 of (I)) and an inhibitor of BID (Bcl2 interacting CC domain) with a compound to be tested for apoptotic inhibiting activity; (b) incubating the cell populations with a direct stimulus of the cell cell populations, where inhibition of the specific apoptotic activity is confidently that the compound is an inhibitor of apoptosis. (I) and (II) (CC call populations, where inhibition of the specific apoptotic activity is confidently that the compound is an inhibitor of apoptosis. (I) and (II) (CC caspase-9) are useful for stimulating apoptosis in a neophastic or tumour cell which overexpresses an inhibitor of caspase, where the CC inhibitor inhibits activation or activity of caspase-3, caspase-7 or created apoptosis which involves contacting a cell transformed or transfected with a vector expressing (I) with a candidate inhibitor or enhancer of a caspase-1 (CC call viability indicates the presence of an inhibitor and a decrease in method involves detecting the presence of an inhibitor and a decrease in cell viability indicates the presence of an enhancer. Optionally, the cell presence of an inhibitor and a decrease in processing indicates the presence of an inhibitor and a decrease in cell viability indicates the presence of an inhibitor and a decrease in the processing indicates the presence of an inhibitor of an inhibitor of caspase-3, caspase-7 or caspase-9, caspase-7 or caspase-9, caspase-1, caspase-9 are detected. (I) is also useful for caspase-9, caspase-1 or caspase-9 are detected. (I) is also useful for caspase-1 or fare the cell of the caspase in the processing indicates 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match

Rd values for Bir 3 and Bir 2 are 0.69 +/- 0.05 uM and 6.7 +/- 0.7 uM, respectively, for the present peptide, compared with 0.42 +/- 0.02 uM and 2.3 +/- 0.3 uM, respectively, for full-length smac. Modification of the N-terminal alanine destroys binding affinity to XIAP. For example, N-terminal alanine with glycine, propionic acid or isobityric acid all resulted in Kd values for Bir 3 and for Bir 2 of over 1.000 uM. The claimed peptides can be used to identify candidate substances which induce or promote apoptosis in cells. The assay involves determination of the ability of candidate compounds to disrupt the binding interaction between a smac (DIABLO) peptide and an IAP family member.
                                                                                                                                                                                                                                                                                                                                                                  Omi; HtrA2; serine protease; inhibitor of apoptosis protein; IAP; caspase; apoptosis; cytostatic; immunosuppressive; neuroprotective;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence is a peptide derived from wild-type human second mitochondria derived activator of caspase (smac), also known as direct inhibitor of apoptosis binding protein with low pI (DIABLO). The peptide is one of 12 claimed smac (DIABLO)-derived peptides (see ABB76208-19) which bind to the Bir2 and Bir3 domain of XIAP, an inhibitor of apoptosis protein (IAP) family member.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      substances
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Novel peptide derived from wild-type human second mitochondria derived activator of caspase protein useful for identifying candidate

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to polynucleotides encoding an Omi (serine protease) peptide or polypeptide. The Omi peptide specifically binds to a portion of an Inhibiting Apoptosis Protein (IAP). The Omi polypeptide induces caspase-independent apoptosis, or fails to have serine protease activity. The Omi peptides are useful for regulating or altering apoptosis, specifically caspase-mediated apoptosis, and as immunogens for raising antibodies. Enhancers of apoptosis are useful for treating cancers, tumours or for destroying cells that mediate autoimmune diseases. Compositions may also be used for the treatment of diseases associated with inappropriate activation of apoptosis such as neurodegenerative diseases and ischaemic injury. The antibodies can be used in isolating omi peptides, polypeptides and their variants, in clean in the stream of the peptides and polypeptides and in inhibiting or enhancing the biological activity of omi peptides and polypeptides. Sequences ABP71310-315 represent fragments of various captured to the period of the period of the period of the control of the control of the period of the control of the period of the control of the period of the control of the control of the period of the control of

CC modulating the death of a cell (by contacting a cell with an

CC agent, which modulates the level and/or functional activity of a

CC polypeptide, a composition for treatment/prophylaxis of a DIABLO related

CC polypeptide or DIABLO. DIABLO, or a nucleic acid encoding DIABLO, is

CC useful for screening for an agent which modulates cell death. An

CC antigen-binding molecule is useful for detecting DIABLO in a biological

CC sample. The agent which modulates the level and/or functional activity of

CC apolypeptide comprising mature or pro-human DIABLO polypeptide, is

CC useful for the treatment and/or prophylaxis of a condition associated

CC useful for the treatment and/or prophylaxis of a condition associated

CC with expression or activation of DIABLO, such as cancer, vascular

CC disease, hepatic disease, autoimmune disease and neurodegenerative

CC disease, tissue damage or muscular tissue damage associated with heart

CC attack, or hepatic tissue damage associated with a liver disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         DIABLO is also useful for treatment and/or prophylaxis of conditions associated with cell death or apoptosis. The present sequence represents a partial peptide sequence from human DIABLO, identified by protein sequencing of a protein (later identified as DIABLO) which co-precipitates with the human IAP protein MIHA (not defined).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        in length. Also included are the polynucleotide encoding DIABIO, expression vectors, transformed host cells, producing a biologically active fragment of DIABIO (by contacting an inhibitor of apoptosis () with a fragment of the polypeptide, and detecting a reduction in activith (and the IAP), producing a natural or synthetic variant of DIABIO with cell death activity or which reduces IAP activity, an antigenbinding molecule that specifically binds to DIABIO or its fragment, detecting DIABIO in a biological sample (by contacting the sample

Also included are the polynucleotide encoding DIABLO.

CC expression vectors, transformed host cells, producing a biologically

CC active fragment of DIABLO (by contacting an inhibitor of apoptosis (IAP)

CC with a fragment of the polypeptide, and detecting a reduction in activity

CC with cell death activity or which reduces IAP activity, an antigen-

CC binding molecule that specifically binds to DIABLO or its fragment,

CC with an IAP and detecting the presence of an IAP/DIABLO complex),

CC modulating the death of a cell (by contacting a cell with an

CC engent, which modulates the level and/or functional activity of a

CC condition comprising an agent which reduces the level/activity of a

CC useful for screening for an agent which modulates cell death. An

CC useful for screening for an agent which modulates cell death. An

CC sample. The agent which modulates the level and/or functional activity of a

CC useful for the treatment and/or prophylaxis of a DIABLO, is

CC useful for the treatment and/or prophylaxis of a condition associated

CC with expression or activation of DIABLO, such as cancer, vascular

CC disease, hepatic disease, autoimmune disease and neurodegenerative

CC disease, tissue damage or muscular tissue damage associated with heart

CC associated with cell death or apoptosis. The present sequence

CC represents a partial peptide sequence from human DIABLO, which

CC operations expending of a protein (later identified as DIABLO) which

CC operations of a partial peptide sequence from human DIABLO, which

CC operations are with the human IAP protein MIHA (not defined).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               second mitochondria derived activator of caspase (smac), also known as direct inhibitor of apoptosis binding protein with low pI (DIABLO). The peptide is one of 12 claimed smac (DIABLO)-derived paptides (see ABB76208-19) which bind to the Bir2 and Bir3 domain of XIAP, an inhibitor of apoptosis protein (IAP) family member. Kd values for Bir-3 and Bir-2 are 0.43 +/- 0.06 uM and 6.0 +/- 0.9 uM, respectively, for the present peptide, compared with 0.42 +/- 0.02 uM and 2.3 +/- 0.3 uM, respectively, for full-length smac. Modification of the N-terminal alanine destroys binding affinity to XIAP, and mutation of the valine, proline or isoleucine also causes some loss of binding. Amino acids C-terminal to the isoleucine are not important for binding. The claimed peptides can be used to identify candidate substances which induce or promote apoptosis in cells who aceasy involves determination of the absolution of the paper involves determination of the apoptosis in a shifty of the aceasy involves determination of the absolution are shifty of the aceasy involves determination of the absolution are shifty of the aceasy involves determination of the ability of the aceasy involves determination of the shifty of the aceasy involves determination of the aceasy involv

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                cells. The assay involves determination of the ability of candidate compounds to disrupt the binding interaction between smac (DIABLO) peptide and an IAP family member.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence is a peptide derived from wild-type human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Claim

Claimed smac-derived peptides (see ABB76208-19) bind to the Bir2 and Bir3 domain of XIAP, an inhibitor of apoptosis protein (IAP) family member. Modification of the N-terminal alanine destroys all binding affinity for the protein. Thus, Kd values for Bir-3 and Bir-2 were each over 1,000 uM for the present peptide, compared with 0.43 +/ 0.06 uM and 6.0 +/ 0.9 uM, respectively, for the corresponding wild-type peptide. The claimed smac-derived peptides can be used to identify candidate substances which induce or promote apoptosis in cells. The assay involves determination of the ability of candidate compounds to disrupt the binding interaction between a smac peptide and an IAP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    mitochondria derived activator of caspase (smac), also known as direct inhibitor of apoptosis binding protein with low pI (DIABLO), but with the native N-terminal alanine residue (see
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel peptide derived from wild-type activator of caspase protein useful f substances to kill cancerous cells -
                                                                                                                                                                                                                                                                                                                                                                           ABB76228 standard; Peptide;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present sequence is a peptide derived from human second mitochondria derived activator of caspase (smac), also known
                                                                                                                                            Synthetic
                                                                                                                                                              Homo sapiens

Claimed smac-derived peptides can be used to identify candidate substances which induce or promote apoptosis in cells. The assay involves determination of interaction between a smac peptide and an IAP family member.
                                                                                                                                                                                                                                                                                                       Human; pro-apoptotic protein; DIABLO; cell death; apoptosis; inhibitor of apoptosis; IAP; cancer; vascular disease; hepatic autoimmune disease; neurodegenerative disease; tissue damage; muscular tissue damage; heart attack; hepatic tissue damage;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present sequence corresponds to amino acids 1-9 of human second mitochondria derived activator of caspase (smac), also as direct inhibitor of apoptosis binding protein with low pl (DIABLO), but is fluorosceinated. The peptide was used in a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              activator of caspase protein useful substances to kill cancerous cells

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    polypeptide or DIABLO. DIABLO, or a nucleic acid encoding DIABLO, is useful for screening for an agent which modulates cell death. An antigen-binding molecule is useful for detecting DIABLO in a biological sample. The agent which modulates the level and/or functional activity of a polypeptide comprising mature or pro-human DIABLO polypeptide, is useful for the treatment and/or prophylaxis of a condition associated with expression or activation of DIABLO, such as cancer, vascular disease, hepatic disease, autolumnune disease and neurodegenerative disease, tissue damage or muscular tissue damage associated with heart attack, or hepatic tissue damage associated with a liver disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    active fragment of DIABLO (by contacting an inhibitor of apoptosis with a fragment of the polypeptide, and detecting a reduction in act of the IAP), producing a natural or synthetic variant of DIABLO with cell death activity or which reduces IAP activity, an antigenbinding molecule that specifically binds to DIABLO or its fragment, detecting DIABLO in a biological sample (by contacting the sample)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Qy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CC for identifying expressed genes. (I) is useful in gene therapy techniques (II) or to treat disease states involving (II) (II) is useful for generating antibodies against it, detecting or CC quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical CC imaging of sites expressing (II). (I) and (II) are useful for treating CC imaging of sites expressing (II). (I) and (II) are useful for treating CC disorders involving aberrant protein expression or biological activity. CC The polypeptide and polynucleotide sequences have applications in CC diagnostics, forensics, gene mapping, identification of mutations cresponsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and CC amino acid sequences. ABG00010-ABG30377 represent novel human CC diagnostic amino acid sequences of the invention.

CC Note: The sequence data for this patent did not appear in the printed constitution, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present sequence is a peptide derived from wild-type human is second mitochondria derived activator of caspase (smac), also known is second mitochondria derived activator of caspase (smac), also known is second mitochondria derived activator of caspase (smac), also known is second mitochondria derived of compared to the sura and sir derived is peptides (see ABB76208-19) which bind to the Bir2 and Bir3 domain of XIAP, an inhibitor of apoptosis protein (IAP) family member. It is considered to the sura and 2.5 +/- 5.0 in the present peptide, compared with 0.42 +/- 0.02 uM and 2.3 +/- 0.3 uM, respectively, for the present peptide, compared with 0.42 +/- 0.02 uM and 2.3 +/- 0.3 uM, respectively, for full-length smac.

Amino acids C-terminal to the isoleucine of smac (DIABLO) are not important for binding to XIAP. The claimed peptides can be used to identify candidate substances which induce or promote apoptosis in cells. The assay involves determination of the ability of candidate compounds to disrupt the family members.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     prablo), but has the native N-terminal alanine residue (see ABB76209) replaced by glycine. Claimed smac-derived peptides (see ABB76208-19) bind to the Bir2 and Bir3 domain of XIAP, an inhibitor of apoptosis protein (IAP) family member. Modification of the N-terminal alanine destroys all binding affinity for the protein. Thus, Kd values for Bir-3 and Bir-2 were each over 1,000 uM for the present peptide, compared with 0.43 +/- 0.06 uM and 6.0 +/- 0.9 uM, respectively, for the corresponding N-terminal Ala peptide. The claimed smac-derived peptides can be used to identify candidate substances which induce or promote apoptosis in cells. The assay involves determination of the ability of candidate compounds to disrupt the binding interaction between a smac
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence is a peptide derived from human seco mitochondria derived activator of caspase (smac), also kn direct inhibitor of apoptosis binding protein with low pI
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Fesik SW,

Claimed smac-derived peptides (see ABB76208-19) bind to the Bir2 and Bir3 domain of XIAP, an inhibitor of apoptosis protein (IAP) family member. Mutation of the valine of the peptide causes some loss of binding to the protein. Thus, Kd values for Bir-3 and Bir-2 were 12 +/- 2 up and 56 +/- 5 up, respectively, up for the present peptide, compared with 0.43 +/- 0.06 um and 6.0 +/- 0.9 um, respectively, for the corresponding wild-type peptide. The claimed smac-derived peptides can be used to identify candidate with the content of the cont

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence is a peptide derived from human second mitochondria derived activator of caspase (smac), also known as direct inhibitor of apoptosis binding protein with low pI (DIABLO), but has the native Ala residue (see ABB76209) replaced by glycine. Claimed smac-derived peptides (see ABB76208-19) bind to the Bir2 and Bir3 domain of XIAP, an inhibitor of apoptosis protein (IAP) family member. Mutation of the amino acids C-terminal to the isoleucine residue of the wild-type peptide caused little loss of binding to the protein. Thus, Kd values for Bir-3 and Bir 2 were 1.2 +/- 0.4 uM and 10 +/- 2 uM, respectively, uM for the present peptide, compared with 0.43 +/- 0.6 uM and 6.0 +/- 0.9 uM, respectively, for the corresponding wild-type peptide. The claimed smac-derived peptides can be used to identify candidate substances which induce or promote apoptosis in cells. The assay involves determination of the ability of candidate compounds to

                                                                                                                                  Ş
                                                                                                                                                                                                                                                                                                             The present sequence is a peptide derived from human second control mitochondria derived activator of caspase (smac), also known as condition of direct inhibitor of apoptosis binding protein with low pI (DIABLO), but has the native N-terminal alanine residue (see ABB76209) replaced by propionic acid. Claimed smac-derived peptides (see ABB76209) replaced by propionic acid. Claimed smac-derived peptides (inhibitor of apoptosis protein (IAP) family member. Modification of the N-terminal alanine destroys all binding affinity for the protein. Thus, Kd values for Bir-3 and Bir-2 were each over 1,000 cm M for the present peptide, compared with 0.43 +/- 0.06 uM and 6.0 +/- 0.9 uM, respectively, for the corresponding N-terminal Ala central middles substances which induce or promote apoptosis in cells. The claimed smac-derived peptides can be used to identify candidate substances which induce or promote apoptosis in cells. The assay involves determination of the ability of candidate compounds to disrupt the binding interaction between a smac compensation and an IAP family member.
